PROJECT APPROVAL FORM AND ABSTRACT

Even 2026-2027

B.Tech Project Details

Project ID: BTP2CSE173

Project Title	Real Time Human Activity Recognition Using Wearable Devices		
Project Type	☐ Community-Based Design Problem (Interdisciplinary) ☑ App Development/Utility ☐ IOT/Hardware-based ☑ AI/ML/Data Science ☐ Healthcare Projects ☐ Cyber Security and networking	Project Outcome	☑ Project and Research Paper ☐ Project and Patent ☐ Project and Book Chapter
		SDG Goal Number	SDG3 - Good Health & Well Being
Publication Target	☐ SCOPUS Journal ☑ SCOPUS Conference ☑ SCI Journal ☐ SCOPUS Book Chapter	Guide Name: Dr. Kamal Kant Verma	

Student Details:

S. No	Name	Roll No.	Admission No.	B.Tech/Branch	Sem
1	Ayush Kumar Ishu	2410030731	19035	CSE (Core)	4th Sem
2	Priyanshu Bisht	2410030679	18444	CSE (Core)	4th Sem
3	Tushar Singh	2410030727	19001	CSE (Core)	4th Sem
4	Aaditya Singhal	2410030670	23417	CSE (Core)	4th Sem
5	Saras Agarwal	2410030775	19431	CSE (Core)	4th Sem

Sustainable Development Goals (SDGs): Targets and Indicators

Goal 1: Eliminate poverty in all its manifestations across the world

Goal 2: Eradicate hunger, enhance food security and nutrition, and support sustainable agricultural practices

Goal 3: Promote good health and well-being for people of all ages

Goal 4: Provide equitable and inclusive quality education and encourage lifelong learning opportunities

Goal 5: Attain gender equality and empower women and girls in all spheres
Goal 6: Guarantee access to clean water and ensure sustainable sanitation management
Goal 7: Ensure the availability of affordable, dependable, sustainable, and modern energy sources
Goal 8: Foster inclusive and sustainable economic development, productive employment, and decent work opportunities
Goal 9: Develop resilient infrastructure, encourage sustainable industrial growth, and promote innovation
Goal 10: Minimize inequalities within nations as well as across countries
Goal 11: Create cities and communities that are inclusive, safe, resilient, and sustainable
Goal 12: Promote responsible consumption and sustainable production practices
Goal 13: Take immediate and effective measures to address climate change and its consequences
Goal 14: Protect and sustainably manage marine and ocean resources
Goal 15: Conserve and restore land ecosystems, manage forests responsibly, and prevent land degradation and biodiversity loss
Goal 16: Encourage peaceful and inclusive societies, ensure justice for all, and strengthen transparent and accountable institutions
Goal 17: Enhance global cooperation and strengthen partnerships to achieve sustainable development objectives

Abstract

This project focuses on real-time human activity recognition using data from wearable devices. Sensor data collected from motion sensors is processed using machine learning algorithms to classify activities such as walking, sitting and standing. The proposed system provides an efficient and non-intrusive solution for activity monitoring in healthcare and fitness applications

Problem Statement

Monitoring human activities is important in healthcare and fitness applications. Traditional methods are either intrusive or inefficient. Wearable devices with motion sensors provide an effective solution but accurate real time activity recognition remaining challenging. This project aims to develop a real-time human activity recognition system using wearable sensor data and machine learning techniques.
